(Twice Amended) An ablation treatment apparatus, comprising:

a trocar including a tissue piercing distal end, and a hollow lumen extending along a longitudinal axis of the trocar;

a multiple antenna ablation device configured to be coupled to an electromagnetic energy source, the multiple antenna ablation device including three or more antennas positionable in the lumen and deployable from the trocar lumen with curvature in a lateral direction relative to the longitudinal axis at a selected tissue mass, each of a deployed antenna having an electromagnetic energy delivery surface size sufficient to create a volumetric ablation between the deployed antennas without impeding out a deployed antenna when 5 to 200 watts of electromagnetic energy is delivered from the electromagnetic energy source to the multiple antenna ablation device;

a movable insulation sleeve disposed over at least a portion of one of an antenna or the trocar, the insulation sleeve configured to vary a length of an energy delivery surface;
